

Manage your Security Keys

Did you know that you can use one (1) Security Key for multiple Google Accounts or you can use multiple Security Keys for just one (1) Google Account?

To manage your registered Security Keys you should return to the **Security Keys** tab (steps 1 - 4) and this time you will have the option to click on **Manage**.

Verification codes	App-specific passwords	Registered computers	Security Keys
--------------------	------------------------	----------------------	----------------------

SECURITY KEYS

A Security Key is a physical device that makes signing in to your Google Account more secure. After registering a Security Key, you can sign in by inserting the Security Key instead of typing a verification code.

You currently have 1 Security Key(s) registered.

Manage your Security Keys

From the Manage screen, you can see when your Keys were associated with your account, where you were when they were added, the last time you used it and where you used it from.

[« 2-Step Verification](#) **Security Keys**

Security Keys associated with your account

Date added	Added from	Last time used	Last time used from	
Today at 2:34 PM	Chrome on Windows in Washington, DC, USA	Today at 2:34 PM	Chrome on Windows in Washington, DC, USA	

[Add another Security Key](#)

If you no longer wish to use a particular Security Key, you have the ability to delete it by clicking on the trash icon.

WARNING: Make sure you have another method for receiving verification codes set up BEFORE deleting a Security Key.

Another method could be a different Security Key, phone number set up for SMS messages, a Google Authenticator App or even your printed back-up codes.

Delete Security Key

Deleting this Security Key will disable its ability to be used while signing into this account. However, this will not turn off 2-Step Verification.

Make sure you have other methods to receive verification codes.
